Useless Information

The world's first electric traffic light signal was installed 75 years ago in Cleveland, Ohio at the intersection of Euclid Avenue and East 105th St.

The footprints left by the Apollo astronauts will not erode, since there is no wind or water on the Moon. They should last at least 10 million years.

In Saudi Arabia, there are solar powered pay phones in the desert.

Contest Winners

Our Wii Smile referral contest has come to an end. We believe that the referral of your friends and family is the highest compliment we can receive. We would like to thank all our wonderful patients that referred a friend or family member to our office. Congratulations to Joey Ianno-he is now the proud owner of a new Wii Sport.

Our summer postcard contest has ended as well. Thank you to everyone that participated in decorating our postcard wall. The Taylor Team would like to congratulate Jake Zimmerman, our Wellington winner, and Ally Norris, our Gardens winner. They each have won a gift certificate worth \$50.00 to the mall in their neighborhood. Remember, this is an annual summer event.

Saving the Earth

Reduce the amount of garbage you make. **Reuse** things instead of throwing them out. **Recycle** paper, plastic, glass and aluminum cans.

A word about recycling, it not only reduces the amount of trash we throw away, but also helps protect the environment and saves energy and resources. E-waste (discarded electronic equipment such as computer and cell phones) contains lead and mercury, which are toxic chemicals that should never reach a landfill. This equipment should be returned to the manufacturer or to a special center for recycling.

Water Water Everywhere

It appears that the Earth has a ton of water. In fact, two-thirds of the Earth is covered with water. However, only about 1 percent of the Earth's water is drinkable. Another 2 percent is frozen glaciers. The rest of it, 97 percent is undrinkable, salty, sea water. The water on earth comes from rain, snow, and other forms of precipitation. However, it does not rain or snow every day. For people to have the water they need, it is important to use water wisely.

Extra Token Question: What Ultraviolet Light is totally blocked by the ozone layers?
